Coef, coefficient from Cox regression; SE, standard error; HR, hazard ratio; CI, 95% confidence interval. AF, atrial fibrillation; CAD, coronary artery disease; COPD, chronic obstructive pulmonary disease; HTN, hypertension; Immunodeficiencies, disorders related to immunodeficiencies (details listed in supplementary tables); T2DM, type 2 diabetes; VTE, venous thromboembolism.

Note that the number and incidence rate of events (hospitalization) are listed for reference only. The incidence rates have not accounted for the length of follow-up which may differ across individuals. The main results were derived from Cox and Poisson regression analyses, for which differences in follow-up have been accounted for.

Results with  $p < 0.05$  are in bold.

Table 2 Association of (at least one dose of) COVID-19 vaccination with mortality hazards

Outcome	Coef	Exp(coef)	SE(coef)	Lower CI	Upper CI	P-value	No. of events in vaccinated	Rate of events in vaccinated (per 100,000)	No. of events in unvaccinated	Rate of events in unvaccinated (per 100,000)
